Demand for tiger parts

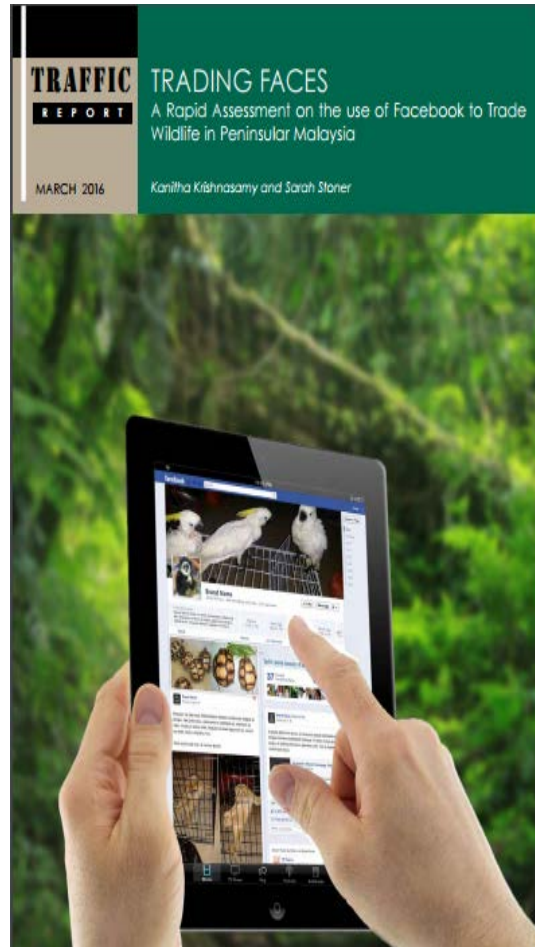

Illegal Wildlife Trade

Scale of **internet trade**: 6 week investigation by IFAW in 2014: **33,006 endangered wildlife parts/products** found on **280 online platforms**.

Responses to internet trade

- Social media monitoring (investigative purposes)
 - Individual + analysis of wider social networks
- “Whack-a-mole” effect: small groups in messaging apps are the current challenge (WhatsApp, WeChat, and in case of recent Malaysia study, closed Facebook groups)

Working directly with major web platforms to prohibit sale of illegal wildlife:

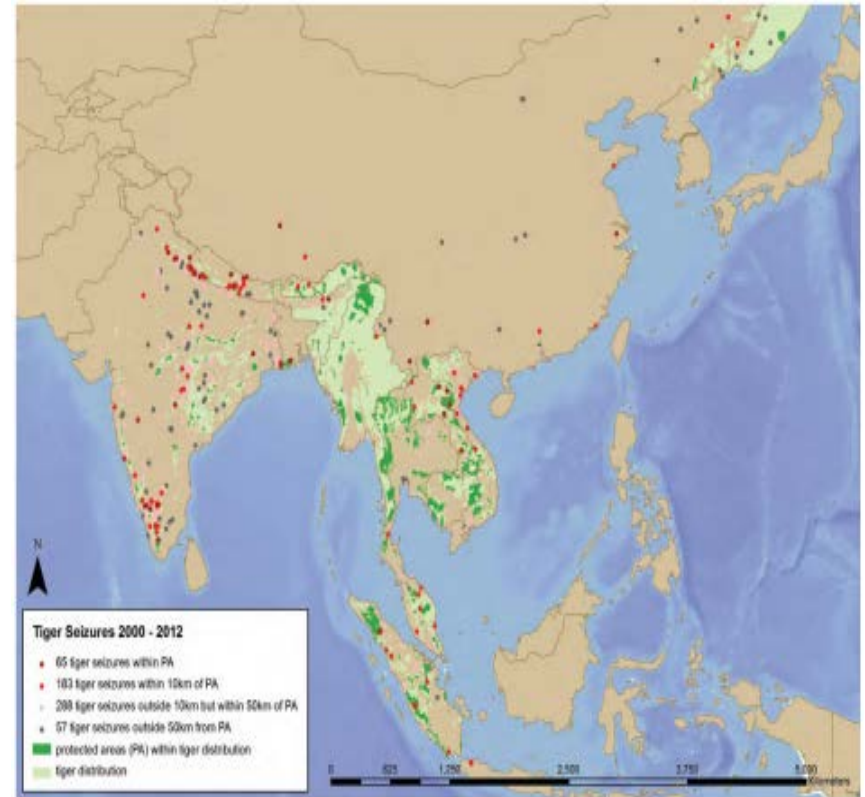

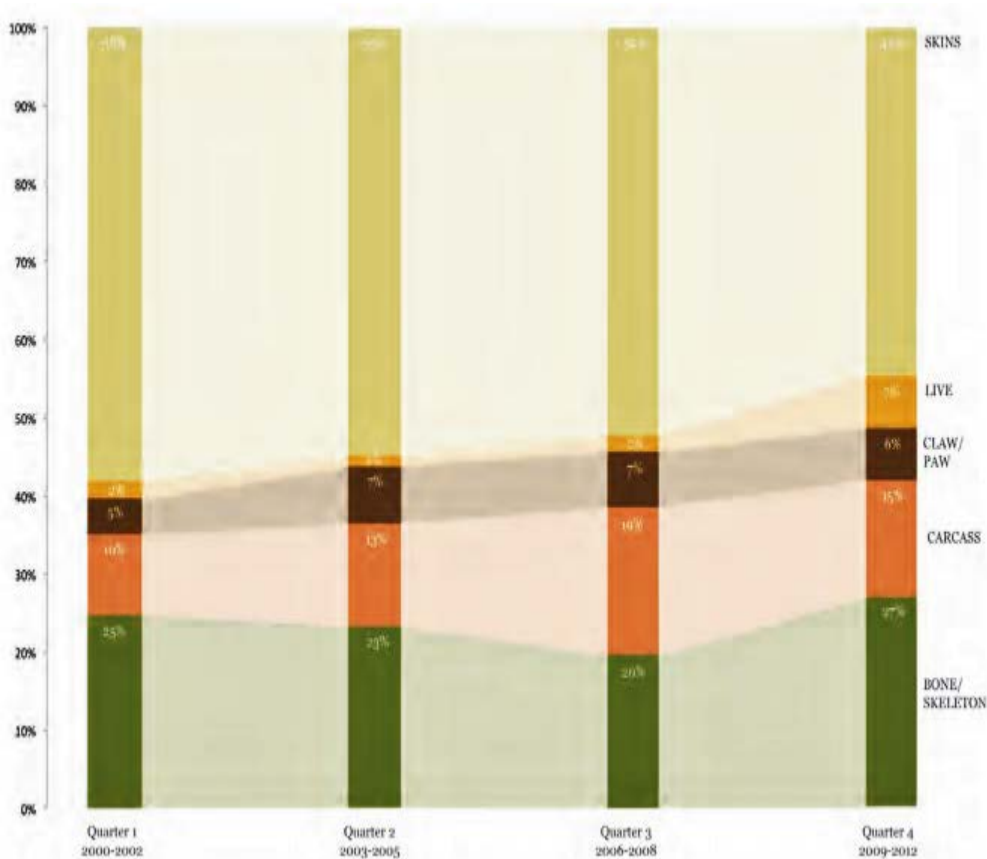

Chinese online retailers say “No” to illegal wildlife products

Representatives from nine major online retailers signed the declaration to prevent illegal wildlife trade. © TRAFFIC

Hangzhou, China, October 2014—Nine of the leading online retail sites in China, including Alibaba, Tencent, Sina, Airmidia, SMG and arton.net agreed earlier this month not to provide opportunities for promotion or trade of illegal wildlife products on their platforms.

Trade in Tiger Products – Seizure data

A photograph of three men standing in a forest. The man on the left is wearing a pink and white striped shirt and grey trousers, holding a wooden stick. The man in the middle is wearing a green and black plaid shirt and tan trousers, also holding a wooden stick. The man on the right is wearing a blue and white plaid shirt and brown trousers, holding a wooden stick. The background is a dense forest with many trees and fallen leaves on the ground.

**Poorly equipped and
prepared rangers**

SMART Standard rangers

SMART

Example of technology in combat illegal wildlife trade

- GPS and real-time data apps for patrol rangers (SMART, etc.)
- Placement of GPS trackers in wildlife products
- Large data mining projects, new computational models, and improved pattern analysis (TRAFFIC)
- DNA and stripe pattern databases for tigers (captive and wild) – TRACE, etc.
- Remote sensing or drone surveillance
- Improved crime scene forensics tools (small and fast species DNA identification tools, etc.)
- Real-time camera monitoring or camera trap networks
- Infrared and heat sensors (*stationary* at strategic locations such as PA perimeter or *mobile* – drone mounted, etc.)
- Apps to identify illegal wildlife in markets (WildScan)
- Anonymous ‘whistleblowing’ websites (WildLeaks, etc.)

Satellite monitoring system of forest cover change

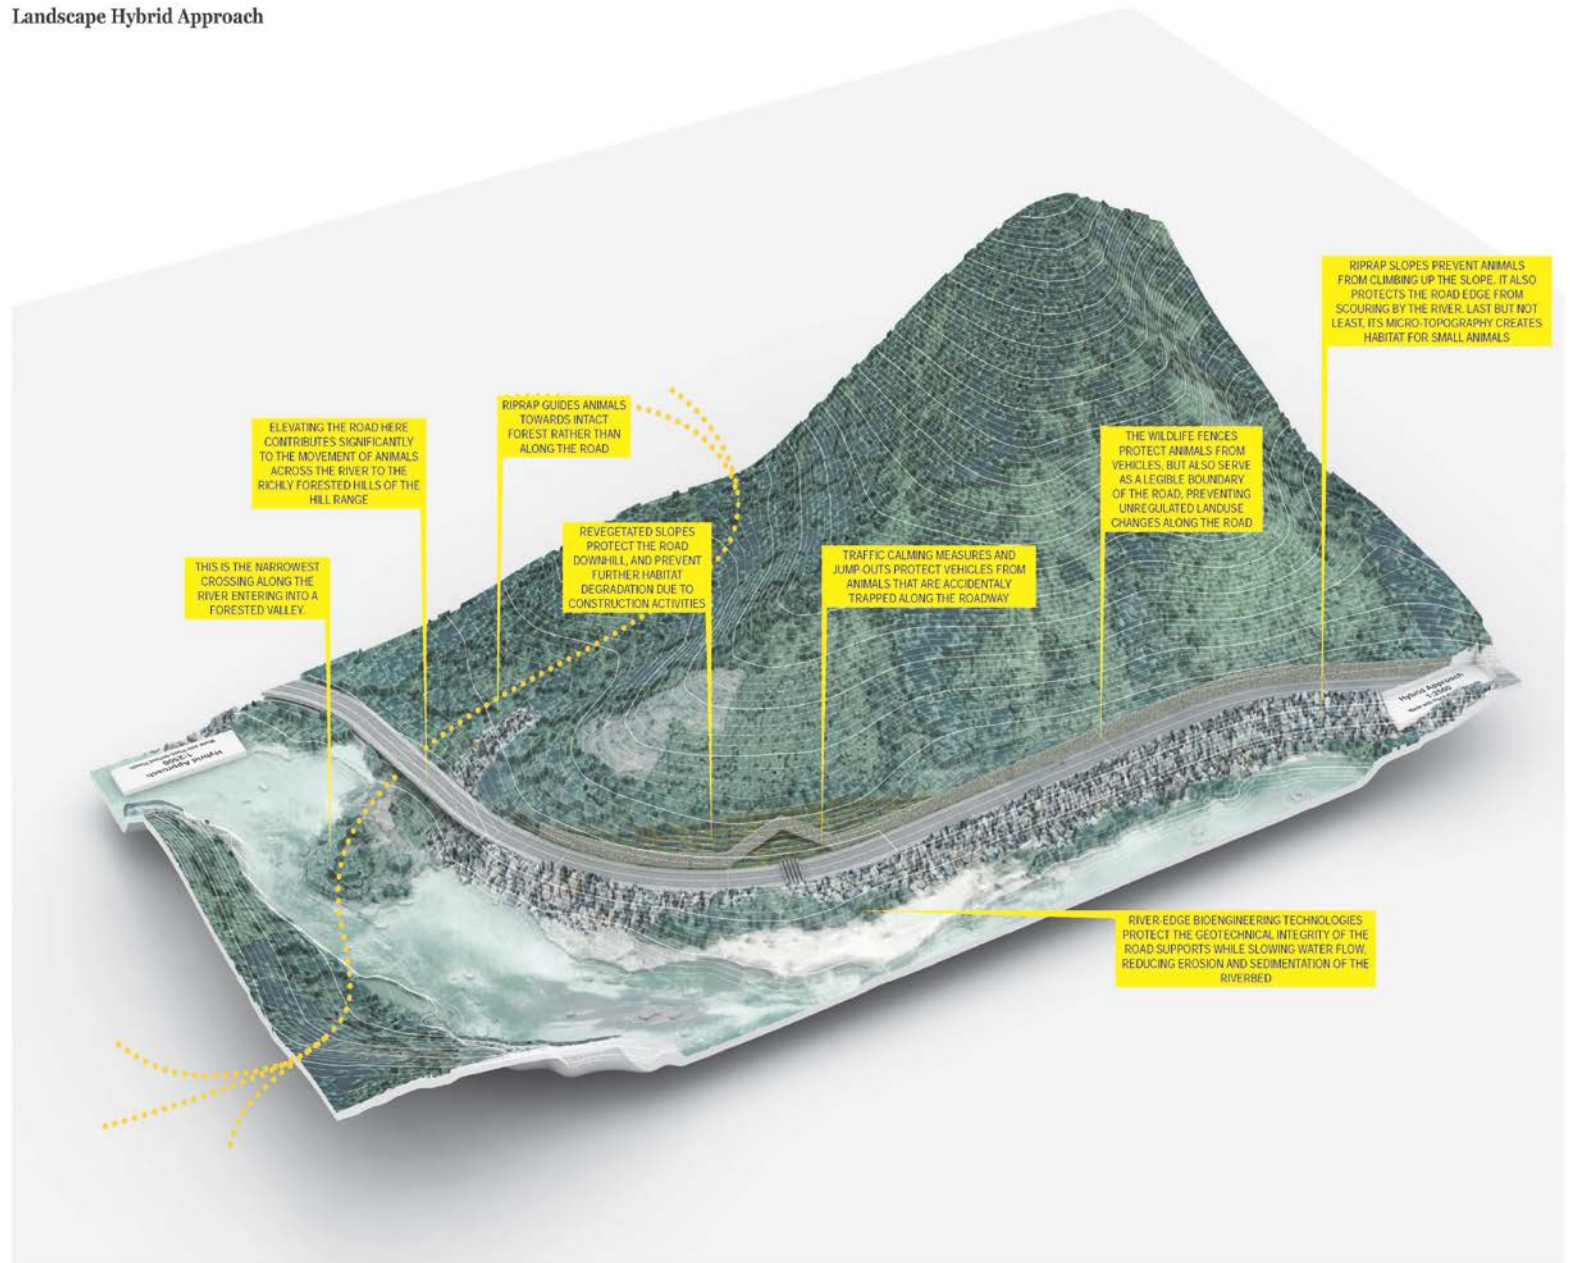

Detects changes in forest cover as small as 0.2Ha, based on the resolution of space image 15 m/pix

KEDR: How It Works

Elevated Structures would Promote Wildlife Connectivity

HEIGHT OF VIADUCT SHOULD ALLOW THE LARGEST TARGET SPECIES TO CROSS, BUT ALSO MAINTAIN SUFFICIENT "OPENNESS" FOR SUNLIGHT IN ORDER TO MAINTAIN HEALTHY VEGETATIVE COVER AND TO ENCOURAGE ANIMALS TO PASS THROUGH

Who's in this photo?

A close-up photograph of a tiger's legs and tail. The tiger is standing on a light-colored, possibly snowy or sandy, ground. The background is blurred, showing some dry vegetation. A semi-transparent white rectangular box is overlaid on the center of the image, containing text.
